SUMMARY

AI and backend engineer with 2.5 years shipping production LLM systems end to end. Built 0 to 1 at three early stage startups: agent orchestration processing 15,000+ submissions, an AI learning platform reaching 10,000+ students across 50,000+ sessions, and real time voice AI answering at 1.5 second latency for 500 daily users. Author of fya, an open source security scanner on PyPI with 800+ downloads and 42 GitHub stars. Comfortable owning a product from the data model to the deployed interface.

SKILLS

Languages: Python, Go, Dart, JavaScript, SQL

AI and LLM Engineering: Agentic workflows, agent orchestration, multi-turn context management, prompt engineering, LLM evaluation and evals, OpenAI API, Google Gemini API, LangChain, Hugging Face

Retrieval and Speech: Retrieval-Augmented Generation (RAG), vector embeddings, semantic search, re-ranking, speech-to-text (STT), speaker diarization, Whisper

Backend and Data: FastAPI, REST API design, Uvicorn, asynchronous processing, PostgreSQL, MongoDB, Supabase, Firebase, pandas, NumPy, scikit-learn, TensorFlow, spaCy

Frontend and Mobile: React, Next.js, Tailwind CSS, Flutter

Infrastructure: Docker, GitHub Actions, CI/CD pipelines, pytest, Git, AWS, GCP

WORK EXPERIENCE

Software Development Engineer, myAlcademy

Feb 2026 - Present

Hybrid, Dubai, UAE

- Led development of a Flutter and web AI-learning platform to **10,000+ students onboarded and 50,000+ learning sessions**, owning the product end to end from backend services through release.
- Built a course automation pipeline that generates and ships persona-targeted courses **within a 72-hour SLA** of a new AI tool launch, replacing a fully manual authoring process.
- Built the customer outreach system on Customer.io, lifting user retention by **8%**.

AI Engineer, Peach

May 2025 - Jan 2026

Delhi, India

- Led AI backend and agent orchestration for a learning platform, processing **15,000+ submissions** in production.
- Built an automated grading system that scored **5,000+ worksheets at 92% rubric accuracy**, removing manual review from the critical path.
- Shipped image and video analysis pipelines adopted by **20+ NGO partners** for field-submitted media.
- Engineered live agentic workflows that generate personalized learning paths, cutting manual intervention per session by **60%**.
- Built multi-turn context management for LLM reasoning, holding task accuracy and coherence across long, complex user sessions.

GenAI Engineer, HYRGPT

May 2024 - May 2025

Remote

- Built a production voice AI assistant handling real-time Hinglish conversations at **1.5-second end-to-end latency for 500 daily active users**, used live in recruitment screening calls.
- Cut LLM inference cost by **60%** by introducing a RAG pipeline over curated datasets, custom scrapers, and prompt iteration driven by offline evals.

- Implemented a resume retrieval and ranking system using vector embeddings with metadata filtering and relevance heuristics, returning recruiter shortlists in real time.
- Designed a speech-to-text and summarization pipeline with speaker diarization and asynchronous inference, cutting transcript turnaround by **70%**.

AI Research Intern, Sultan Qaboos University

Jun 2024 - Aug 2024

Muscat, Oman

- Developed a career recommendation system combining psychometric signals, structured user data, and LLM reasoning.
- Evaluated recommendation quality across cultural contexts and integrated multimodal (text and image) inputs to improve personalization and interpretability.

Research Intern, CSIR-IHBT

May 2024 - Jun 2024

Palampur, India

- Built a React clinical analytics dashboard for Alzheimer's screening experiments, pairing real-time visualization with authenticated access.
- Optimized the lab website across frontend and backend, improving page-load performance by **60%**.
- Prototyped IoT-assisted health monitoring on Raspberry Pi for data collection and preprocessing.

PROJECTS

fya, open source application security scanner

Python, PyPI

fya.ayamk.in | github.com/ayam04/fya

- Built and published a dynamic application security scanner (DAST) to PyPI with **58 checks** mapped to the OWASP Top 10, OWASP MASVS, and CWE, scanning running servers, Android APKs, and source directories from one command.
- Grew adoption to **800+ downloads and 42 GitHub stars**; orchestrates Nuclei, Nikto, sqlmap, nmap, and testssl when present, emitting SARIF, HTML, and JSON reports with CI-ready exit codes.
- Maintained it as a production package: Docker image, a 14-module pytest suite with coverage, and three GitHub Actions workflows covering CI and automated PyPI publishing.

Google Meet Note Taker

Python, Whisper, Selenium

- Built a real-time meeting transcription bot using speaker diarization, Whisper, and browser automation to join and capture calls unattended.
- Added a virtual sound-card capture layer to raise transcription fidelity and keep capture stable across full-length meetings.

Quick Accent

Python, scikit-learn, librosa

- Built an MFCC-based baseline for regional accent classification across multiple Indian languages.
- Evaluated with train/test splits and cross-validation, identifying overfitting risk and dataset bias in the source corpus.

EDUCATION

B.Tech in Computer Science, Manipal University Jaipur

Jaipur, India

Diploma in Data Science, Indian Institute of Technology Madras

Online
